

Mid-Level Front-End Engineer (Hybrid – Lahore, Pakistan)

You Might Be a Fit If...

- You have 2-4 years of front-end development experience, with solid skills in building clean, responsive UIs for SaaS products
- You have strong knowledge of React and the JS ecosystem, and are comfortable with component-based architectures
- You have a good eye for design and pay close attention to detail—you spot when things look off and fix them
- You understand how to create balanced, user-friendly interfaces that follow design guidelines
- You have experience working with design systems and implementing them consistently
- You care about performance, scalability, and UI/UX best practices—every improvement in speed or usability counts
- You have hands-on experience with component libraries like TailwindCSS, ShadCN, or Ant Design, and can adapt them to fit designs
- You've worked with RESTful APIs, GraphQL, or WebSockets for data integration and basic real-time features
- You write readable, maintainable TypeScript or JavaScript code that can grow with the product
- You're familiar with state management tools (like Zustand, Redux, or React Query) and can implement them effectively
- You have some experience optimizing for performance metrics and ensuring good Lighthouse scores
- You build accessible UIs that prioritize inclusivity without compromising on quality
- You enjoy turning design mockups into functional, polished interfaces
- You're adaptable in a dynamic environment and can juggle priorities while learning on the go
- You thrive on ownership, working independently, and delivering features that users love

Why Join Us?

- Work with a high-caliber team that moves fast and values deep thinking.
- We build, hack, and brainstorm like no other company. If you're eager to grow in your career and tackle exciting challenges, this is the place for you.
- Be part of something big. We're not just building a product, we're completely changing an industry.

What You'll Do

- Develop and maintain responsive, user-friendly UIs that provide a great experience.
- Focus on speed, accessibility, and performance to create smooth interactions.
- Hands-on coding with React, Next.js, TailwindCSS, and component libraries to build reusable UI elements.
- Implement state management and data fetching for dynamic features (using Zustand, Redux, React Query).
- Collaborate with backend engineers for smooth API integrations and efficient workflows.

- Contribute to the front-end roadmap, helping evolve our stack for better performance.
- Enhance UI/UX by balancing functionality, design, and efficiency.
- Join in-office every other day to collaborate, brainstorm, and build with the team.

DO NOT APPLY IF:

1. You are not passionate about solving problems in creative ways.
2. You avoid stepping outside your comfort zone.
3. You are unwilling to question and refine your engineering approaches.
4. You are not open to learning new tools and skills.
5. You prefer working in isolation rather than collaborating with driven teammates.
6. You are not interested in using **AI tools** to boost your productivity.
