Summary

Computer Engineering student at UET Lahore with practical experience in building scalable software solutions using Python, Java and C++. Adept at developing responsive GUI applications, process automation tools and database driven systems using SQL. Strong foundation in object-oriented design, clean code principles and the full software development life cycle (SDLC). Passionate about solving real-world problems through technology and eager to contribute to high impact projects in fast-paced engineering environments.

Technical Skills

- **Languages:** Python, Java, C++, SQL, Assembly
- **Frameworks/Tools:** OpenCV, Selenium, Tkinter, Pygame, MS SQL Server, Git, Android Studio, VS Code
- **Concepts:** Clean Code Principles, SDLC, Database Management

Education

BS University of Engineering and Technology, Lahore, Computer Engineering 2022 – 2026
• **Description:** Completed 6 semesters | Expected Graduation: 2026

Hobbies

Travelling, Problem Solving through Coding

Projects

Face Recognition Attendance System

5th Semester, 2024 — Course Project

Achieved 95% recognition accuracy for a class of 30 students using OpenCV and socket programming. Integrated CSV-based attendance logs with a local server, enabling real-time access on 3+ devices and automated LMS report handling through Selenium scripts saving over 30+ minutes.

Wallet & Bank Management Platform

4th–5th Semester, 2023–2024 — OOP/Java Course Project

Built a Java-based wallet app supporting fund transfers, utility bill checks and complaint registration for up to 10 test users. The admin panel enabled account management, OTP-based email verification, complaint resolution and generation of HTML receipts and PDF statements. Designed with a layered architecture and tested under multiple concurrent transactions.

Grocery Store

4th Semester, 2023 — DBMS Course Project

Developed a Java + MS SQL Server desktop app to manage 100+ products, 10 employees and 4 regional stores. Integrated live stock updates, employee tracking and rider assignments through a centralized admin panel. Optimized the system for multi-user access and efficient data retrieval.

Transliterator Tool

2nd Semester, 2023 — Personal Project

Built a CLI Urdu to Roman Urdu and vice versa converter in Python using rule-based mapping. Processed 1000+ strings with 92% accuracy. Supported informal sentence structure and preserved punctuation and formatting styles.

Games & GUI Utilities

3rd Semester, 2023 — Personal Projects

Created Snake, Dino Runner and Tic Tac Toe games plus tools like timers and calculators using Python's Tkinter and Pygame. Prioritised clean UI, real-time responsiveness and event-driven controls for smooth interaction across screen sizes.

Assembly x86 Project

4th Semester, 2023 — Assembly Course Project

Created a full-screen Tic Tac Toe game in Assembly using string printing and cursor positioning via 'goto' routines. Featured player-vs-player and player-vs-computer modes in a text-based interface with color-coded X and O symbols. Simulated layout using character-based rendering and handled user input through basic interrupt calls, demonstrating low-level interface control without graphics libraries.

Certifications

- **Certified in Python (Basic)** – [HackerRank Certificate](#)
- **Certified in Java (Basic)** – [HackerRank Certificate](#)
- **Software Engineer Intern Role Certification** – [HackerRank Certificate](#)
- **Course: Introduction to C++** – [Coursera](#)
- **Course: GUI Applications in Java** – [Coursera](#)
