BISE, Gujranwala	2016-2018

Projects

Holidays.com (A replica of Booking.com)

This project is a full-fledged travel booking web application inspired by platforms like Booking.com. It is designed to provide a seamless experience for users looking to search for accommodations, view hotel details, and make room bookings, all through an intuitive and responsive user interface. The application supports secure user authentication and role-based access control, allowing different types of users such as travelers, hotel managers, and administrators to interact with the platform according to their roles. Travelers can search for hotels using various filters like destination, check-in and check-out dates, number of guests, price range, star rating, and amenities. Each hotel listing includes detailed information such as images, descriptions, available rooms, pricing, customer reviews, and maps. Once a user selects a hotel and a room, the booking system verifies availability in real time and allows for instant reservation, followed by a booking confirmation summary and email notification.
